## IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with <u>underlining</u> and deleted text with <u>strikethrough</u>. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please CANCEL claims 10, 12-30, 32-49 and 51-54 and AMEND the claims in accordance with the following:

1. (CURRENTLY AMENDED) A terminal device having a power saving mode in which the terminal device works with less power consumption than in a normal mode, said terminal device comprising:

a first display section the display of which is turned off during the power saving mode and resumed when restored to the normal mode, the first display section is a main display of the terminal device;

a storage section which stores at least one URL on a network;

a second display section which displays either the URL stored in the storage section or identification information corresponding to the URL at least during the power saving mode, the second display section is a display visible when the main display of the terminal device is in a closed position; and

an access processing section which executes access processing against the URL, or a URL corresponding to the identification information, displayed on the second display section in response to a cancellation operation of the power saving mode <u>by opening the terminal device</u> <u>from the closed position by an user</u> to obtain information from the URL and display the obtained information in the first display.

- (PREVIOUSLY PRESENTED) The terminal device according to claim 1, wherein, depending on a URL type, the access processing section activates an application program necessary for accessing the URL, and said application program accesses the URL.
- 3. (ORIGINAL) The terminal device according to claim 2, wherein, when the URL type is a type designating a Web page address on the network, the access processing section activates a browser program, and

when the URL type is a type designating an electronic mail address, the access processing section activates a mail program.

- 4. (ORIGINAL) The terminal device according to claim 1, wherein the storage section stores a URL accessed last time before shifting to the power saving mode.
- 5. (ORIGINAL) The terminal device according to claim 1, wherein the storage section stores an arbitrary URL according to an instruction by a user.
  - 6. (ORIGINAL) The terminal device according to claim 1,

wherein in the case the storage section stores a plurality of URLs, the terminal device further comprises:

a first operation section for selecting a URL, or identification information corresponding to the URL, displayed on the second display section out of the plurality of URLs.

 (PREVIOUSLY PRESENTED) The terminal device according to claim 1, wherein: the first display section is mounted so as to be opened and closed against a main body of the terminal device; and

the second display section is disposed in a visible position when the first display section is placed in a closed condition.

- 8. (ORIGINAL) The terminal device according to claim 7, further comprising:
  a second operation section for canceling the power saving mode, being disposed in an operable position while the first display section is placed in the closed condition.
- 9. (PREVIOUSLY PRESENTED) The terminal device according to claim 7, further comprising:

a drive section which enables the first display section, being closed in the power saving mode, to open in response to the cancellation operation of the power saving mode.

## 10 - 54. (CANCELLED)

55. (CURRENTLY AMENDED) The terminal device according to claim 1, wherein the terminal device is a laptop computer, the first display section is a main display of the laptop

Serial No. 10/629,604

computer, the second display section is a display visible when the main display of the laptop computer is in a closed position, and the access processing section executes access processing against the URL displayed on the second display section when a user opens the laptop from the closed position.

56. (CURRENTLY AMENDED) The terminal device according to claim 1, wherein the terminal device is a cellular phone, the first display section is a main display of the cellular phone, the second display section is a display visible when the main display of the cellular phone is in a closed position, and the access processing section executes access processing against the URL displayed on the second display section when a user opens the cellular phone from the closed position.
